

61  
portion 2D and head end connecting portion 2B. The branch portion 2D is extended away from the other connecting spring plate 2. The branch portion 2D of the spring plate 2 is turned in U-shape. The base end connecting portion 2A is bent in L-shape and the head end connecting portion 2B is bent in U-shape as connecting portions between the sound generator and a printed circuit board.

IN THE CLAIMS:

Please amend the claims as set forth hereinbelow, and in the attached appendix:

62  
527  
4. (Twice Amended) The device according to claim 5 wherein a portion of each of the connecting spring plates other than the base and head end connecting portions is coated with nickel by nickel plating.

Please cancel claims 1-3 without prejudice or disclaimer of the subject matter thereof, and add the following new claim:

--5. (New) A connecting device for a sound generator comprising:

63  
526  
61  
a pair of connecting spring plates disposed adjacent to the sound generator, each of the connecting spring plates comprising a base end connecting portion, an intermediate portion, a branch portion, and a head end connecting portion, the intermediate portion and the branch portion forming an
